CARY EDWARDS
Attorney General

COLONEL C. L. PAGANO
Superintendent

Dear Reader:

As in the past, the state of New Jersey will once again be ranked as one of the safest states in the nation. We believe the major factors attributed to this were the continuing alcohol awareness programs, the mobile D.W.I. patrols, the sobriety checkpoints, and the 55 M.P.H. speed enforcement programs.

The statistics for 1987 indicate a death rate of 1.8 for every 100 million vehicle miles traveled. During 1987, motorists in New Jersey traveled approximately 58 billion miles, which was an increase of over 2 billion miles from the previous year.

This report constitutes a detailed look at the causes and results of fatal accidents throughout the state during 1987. Hopefully, the continued efforts and cooperation of the public, federal, state, and local agencies will help us maintain our traffic safety record in the years ahead.

It is important that the law enforcement community be firmly committed to the 55 M.P.H. speed enforcement programs. We are convinced that this will save lives.

On the following pages you will find statistics of the fatal traffic accident records compiled by the Fatal Accident Unit of the Division of State Police for 1987.

Sincerely,

Clinton L Pagano

M. ALCOHOL FACTOR

There were 1023 fatalities during 1987. Of this total, 819 were tested for alcohol and 204 were not tested. The various reasons for those not tested were: delayed deaths; age factors; contamination of samples; and the failure on the part of some investigative agencies and medical examiners to have tests performed on the victims. Of the fatalities, 536 were drivers; 240 passengers; 215 pedestrians; and 32 were pedalcyclists. Of the 819 tested, 311 were positive for alcohol in varying degrees and 508 were negative. Six tested positive for drugs. This would indicate 38% of the fatalities tested were positive for alcohol and 62% were negative.

There were 212 drunken driving related fatal accidents (.10% and over) in 1987 compared to 185 in 1986 and 234 people killed in drunken driving related fatal accidents (.10% and over) in 1987 compared to 207 in 1986. This is a 14.6% and a 13% increase respectively.

The attached chart is a breakdown of victims and the percentage of alcohol in each classification. An analysis of the chart by victim classification indicates the following:

1. **Drivers:**

   Killed:

   There was a total of 536 drivers killed, of which 472 were tested. Of those tested, 200 were positive and 272 negative, for a 42.3% alcohol factor. The .10% and over alcohol level has the largest number listed. Of the 200 imbibing drivers, 152 or 76.0% had an alcohol level of .10% or higher.

   Surviving:

   There was a total of 901 surviving drivers of which 284 were tested. Of those tested: 106 were positive for alcohol in varying degrees and 174 were negative, for a 37.3% positive alcohol factor. Of the 106 imbibing drivers, 70 or 66% had an alcohol level of .10% or higher.

2. **Passengers:**
   There was a total of 240 passengers killed of which 163 were tested. Of those tested, 49 were positive and 114 were negative for a 30.0% positive alcohol factor.

3. **Pedestrians:**
   There was a total of 215 pedestrians killed of which 167 were tested. Of those tested, 59 were positive and 108 negative for a 35.3% alcohol factor.

4. **Pedalcyclists:**
   There was a total of 32 pedalcyclists killed of which 17 were tested for alcohol content. Of those tested, 3 were positive and 14 negative for a 17.6% alcohol factor.

Had Been Drinking: Includes those delayed deaths where an odor of alcohol was detected. Includes admittance of victim (in delayed death) or statements of witnesses. Includes lab reports which show a trace and not a percentage, or reading below 0.01%.

Negative: Tested and found to be negative.

No Test: Because of delayed death, age factor, contamination of samples, and the failure on the part of some investigative agencies and medical examiners to cause test to be performed on victims.

Note: Superior number indicates number of victims tested positive for drugs.

SPECIFIC AREAS OF CONCERN

INTERSTATE HIGHWAY FATALITIES

The Interstate Highway System of New Jersey is approximately 93.8% completed. Of the 418.65 miles of roadway which are projected for this system, 392.93 miles have been opened to the motoring public. With this number of roadway miles open through a variety of areas such as rural, urban, flat, hilly, etc., an equal variety of accidents have become prevalent. Beyond the smaller "damage to property" type of accidents we are now encountering the non-repairable . . . the human fatality. Twenty-one percent of the thirty-eight (38) fatal accidents which occurred during 1987 involved pedestrians. Thirty-two percent of the accidents had alcoholic beverages contribute heavily towards causing the accidents. Over the twelve month span, the death rate averaged 3.3 deaths per month, and one death for every 9.8 miles of roadway. In order to have a clear, concise picture of the type and age of victim, as well as the manner and contributing factors of these fatal motor vehicle accidents, the following facts are outlined for you.

Of the 32 pedalcycle fatalities, 18 were tested for alcohol content. Three pedalcyclists were found to be .15% and over and 15 were negative. The remaining 14 were not tested due to age factors, delayed deaths, etc.

Moped Involvement

In 1987, there was one moped fatal accident involving a 68 year-old male driver.

MOTORCYCLE INVOLVEMENT

There were 49,458 motorcycles registered in New Jersey during 1987.

AGE OF MAJORITY

On January 1, 1973, the legal drinking age in New Jersey was lowered from 21 to 18. On January 2, 1980, the legal drinking age was raised to 19 because of the increase in drunken-driving related fatal accidents in the age group of 18, 19 and 20. On December 28, 1982, the legal drinking age was returned to age 21 due to the escalation of drunken driving related fatal accidents in the age group of 18, 19 and 20.

Listed below are the 18 to 20 year-old drivers involved in fatal motor vehicle accidents. The year 1972 is used as a base, being the year prior to the age of majority.

COLONEL C.L. PAGANO
Superintendent

Dear Reader:

As in the past, New Jersey will again be ranked as one of the safest states in the nation. We believe the major factors contributing to this achievement are the continuing alcohol awareness programs, the mobile D.W.I. patrols, the sobriety checkpoints, and the 55 M.P.H. speed enforcement programs.

The statistics for 1988 indicate a death rate of 1.79 for every 100 million vehicle miles traveled. During 1988, motorists in New Jersey traveled approximately 59 billion miles, which was an increase of over 1 billion miles from the previous year.

This report constitutes a detailed review of the causes and results of fatal accidents throughout the state during 1988. Hopefully, the continued efforts and cooperation of the public, federal, state, and local agencies will help us maintain our traffic safety record in the years ahead.

It is essential that the law enforcement community be firmly committed to the 55 M.P.H. speed enforcement programs. We are convinced that this will save lives.

On the following pages you will find statistics of the fatal traffic accident records compiled by the Fatal Accident Unit of the Division of State Police for 1988.

Sincerely,

M. ALCOHOL FACTOR

There were 1051 fatalities during 1988. Of this total, 832 were tested for alcohol and 219 were not tested. Of the fatalities, 530 were drivers, 263 were passengers, 239 were pedestrians, and 19 were pedalcyclists. Of the 832 tested, 333 were positive for alcohol in varying degrees and 499 were negative. This indicates 40% of the fatalities tested were positive for alcohol and 60% were negative.

There were 226 drunken driving related fatal accidents (.10% and over) with 263 people killed.

The attached chart is a breakdown of victims and the percentage of alcohol in each classification. An analysis of the chart by victim classification indicates the following:

1. **Drivers:**

   Killed:

   There was a total of 530 drivers killed of which 458 were tested. Of those tested, 202 were positive and 256 were negative for a 44.1% alcohol factor. Of the 202 imbibing drivers, 156 or 77.2% had an alcohol level of .10% or higher.

   Surviving:

   There was a total of 913 surviving drivers of which 243 were tested. Of those tested, 109 were positive and 134 were negative for a 44.8% alcohol factor. Of the 109 imbibing drivers, 84 or 77.0% had an alcohol level of .10% or higher.

2. **Passengers:**
   There was a total of 263 passengers killed of which 171 were tested. Of those tested, 57 were positive and 114 were negative for a 33.3% alcohol factor.

3. **Pedestrians:**
   There was a total of 239 pedestrians killed of which 191 were tested. Of those tested, 73 were positive and 118 were negative for a 38.2% alcohol factor.

4. **Pedalcyclists:**
   There was a total of 19 pedalcyclists killed of which 12 were tested. Of those tested, 1 was positive and 11 were negative for a 8.3% alcohol factor.

Legend:

Had Been Drinking: Includes those delayed deaths where an odor of alcohol was detected. Includes admittance of victim (in delayed death) or statements of witnesses. Includes lab reports which show a trace and not a percentage, or reading below 0.01%.

Negative: Tested and found to be negative.

No Test: Because of delayed death, age factor, contamination of samples, and the failure on the part of some investigative agencies and medical examiners to cause test to be performed on victims.

Note: Superior number indicates number of victims tested positive for drugs.

SPECIFIC AREAS OF CONCERN

INTERSTATE HIGHWAY FATALITIES

The Interstate Highway System of New Jersey is approximately 93.8% completed. Of the 418.65 miles of roadway which are projected for this system, 392.93 miles have been opened to the motoring public. During 1988, the death rate averaged 7.2 deaths per month and one death for every 4.6 miles of highway. A concise analysis of victim classification and alcohol involvement, driver ages, contributing circumstances, and manner of collision is outlined on the following page.

AGE OF MAJORITY

On January 1, 1973, the legal drinking age in New Jersey was lowered from 21 to 18. On January 2, 1980, the legal drinking age was raised to 19 because of the increase in drunken-driving related fatal accidents in the age group of 18, 19 and 20. On December 28, 1982, the legal drinking age was returned to age 21 due to the escalation of drunken-driving related fatal accidents in the age group of 18, 19 and 20.

Listed below are the 18 to 20 year-old drivers involved in fatal motor vehicle accidents. The year 1972 is used as a base, being the year prior to the age of majority.
